# Open Access Web Archive

Derek D'Arcy

09/06/24

Abstract:

The purpose of this project will be to create and launch a website for users to archive their presentations. For background information, LTU each year has a research day in which Seniors, Undergraduate and Graduate students present their semester-long research projects. As it was presented, the only copy of these masterworks from students is held via paper copy in the library at the school. This project aims to create another venue to archive these presentations, in a digital format for better preservation, as well as easier access to past presentations.

Conceptual Model:

Creative, Novel and Innovative:

This project may not seem creative or flashy, however it is innovative in the execution. While an archive website is not a new concept, it is a new application by LTU, as using one to archive senior projects and research projects would provide a new avenue for LTU to show off. This project does have a chance at entrepreneurship, as if the project is well polished, and functions as designed, there is a very real possibility for LTU to implement the Web Archive Project as the solution to the current issue they have with the archaic method of storing past projects.
